

DIAGNOSTIC FOCUS

Diagnostic Health Scan

WHAT IS A DIAGNOSTIC HEALTH SCAN?

The Diagnostic Health Scan provides a comprehensive full system scan and then shows the results in a customer-friendly report with an easily understandable overview. It explains the vehicle's condition and identifies potential issues in a simple manner. This report is reduced from a full pre- and post-scan report to one that is easily understandable for your customers, and can be printed or sent digitally (via text or email) through the Snap-on® Cloud.

HOW CAN THAT HELP ME?

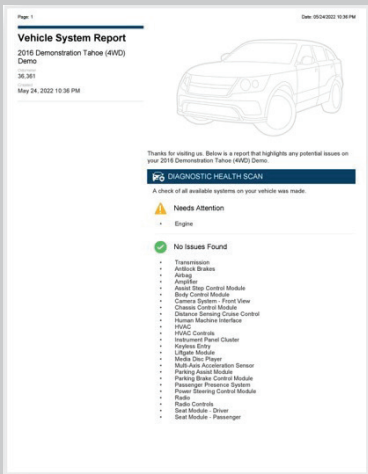

Running a Health Scan provides assurance to a vehicle owner of the vehicle's state before and after repairs. Since numerous vehicle systems may not display issues through warning lights or by displaying a message on the Diagnostic Information Center of the vehicle, the Health Scan becomes essential in detecting hidden problems.

By presenting customers with the health-scan report, you can show customers' existing issues, and once the vehicle is repaired, you can demonstrate the effectiveness of the repairs.

WHEN SHOULD I USE IT?

Conduct a health scan before beginning any work and after completing the repair, you can then show the vehicle state both before and after the repair, it's a great way to justify your diagnostic charge.
