

DIAGNOSTIC FOCUS

WIRELESS TECHNOLOGY AND TRAINING

The Snap-on® Diagnostic range of products now includes two products that have the advantage of connecting through a wireless scan module. Why is that an advantage in the shop?

With a wireless device, techs have the ability to maneuver around and position themselves anywhere around the vehicle—or any part of the shop.

For example, checking a wheel speed sensor. During diagnosis a tech can lift the vehicle and monitor data while still spinning the wheel.

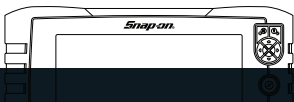

Scan the QR code for a short clip that explains some of the jobs that are made a little easier by having wireless freedom to walk around the bay with your diagnostic platform – as well as some of the unique advantages of the new Gen 3 TRITON™.

WANT MORE TRAINING?

For more training check out our YouTube® channel where we have hundreds of videos covering a variety of Diagnostic subjects.

Weekly Live Training sessions mean you can interact with the trainers live. Get info on a variety of subjects designed to help build your diagnostic knowledge. Including OEM focused sessions, where our trainer takes you through a history of the manufacturer, common repair scenarios, unique scan tool functions and tests that are specific to the brand. Join Jason Gabrenas & Keith Wray for a session here.
