

DIAGNOSTIC FOCUS

Getting a Software Update

Keeping your diagnostic tool up-to-date is the best way to ensure it's working to its full potential and is connected to all the services available.

STAY CURRENT

Staying up-to-date with the latest vehicle diagnostic technology and software advancements is crucial for shops and technicians. Snap-on® continues to support our customers in providing the most efficient and effective service possible with 'Over-the-Air' (OTA) software updates now available on a large number of platforms, including ZEUS™, TRITON™ and APOLLO™ families as well as VERUS™ Edge and SOLUS™+.

GET A PLAN

Be the first in your area to get the update! Over-the-Air software updates are available for customers to download immediately, once a release is available, when you have a subscription or data plan agreement in place.

CONNECT TO WI-FI

Keep your tool connected to Wi-Fi to keep on top! Your diagnostic tool will automatically check for software upgrades and updates when connected to Wi-Fi. This automatic check occurs every time the diagnostic tool is turned on.

TOP TIP!

Fully shut down your diagnostic tool and restart it on a regular basis. Every time you do that it will check for the latest enhancements and ensure your unit is running efficiently.
