Snap-on "Hockey II" 700 Lumen Project Light Offers Big Light in a Small, Aircraft-grade Aluminum Package

KENOSHA, Wis. (Dec. 19, 2017) – Ideal for jobs in and around confined spaces, the new Snap-on "Hockey II" ECPRA072 is a 700-lumen light that offers big light in a small package.

"Snap-on is known for taking the best and making it even better, and that's what we've done with this light," says Mark Ganey, a Snap-on Tools product manager. "We took a popular, lower lumen light, increased the brightness, run time and durability to provide the ultimate product in our smallest lighting category."

Commonly referred to as the "Hockey II" light due to its similarity in size and shape to a hockey puck, this light is the second generation, following its predecessor, the ECFHKY. The unique ECPRA072 is made of aircraft-grade aluminum alloy and has an IP54 rating for its capacity to withstand exposure to water and dust. It is the first aluminum bodied project light in the line and utilizes USB-C for recharging – the newest standard in portable electronics. When fully charged, the Hockey II lasts up to six hours on its lowest setting and two hours on high. This light further stands out from competitors by offering a built-in battery gauge, variable dimming and can withstand drops from an unprecedented 4 meters.

The ECPRA072 is the latest addition in our 'project light' category, comprised of small-format lights for more intimate workshop settings, and is the ideal solution for illuminating brake work, wheel wells and any small format jobs.

Find out more about the ECPRA072 Hockey II light by contacting your participating Snap-on franchisee or other representative, visiting www.snapon.com or calling toll-free 877-SNAPON-4 (877-762-7664).
