## **Built with strength and accessibility in mind, Snap-on introduces new IQON line of tool storage cabinets**

**KENOSHA, Wis. (May 2, 2018)** – Snap-on is introducing its new IQON™ line of roll cabinets, designed with exclusive features for today's workplace. The line features a taller profile for more optimum ergonomics and improved work center visibility. The KCP1422 IQON, the first roll cab in the series, features three 50" full-width drawers, each with four bottom supports, so larger everyday-use tools can be moved from lower to higher drawers for greater accessibility. Engineered and built in the USA, the series presents techs with unique solutions for organizing and accessing what they need quickly. The SpeedDrawer provides a customizable drawer divider system for small parts and tools, and the popular PowerDrawer offers an in-drawer charging system with five offset 110 V outlets and a curved front section with two quick-access USB outlets.

"The three top drawers provide a new level of efficiency as a tech doesn't have to bend over to reach the majority of often-used tools," said Jay Serpe, a Snap-on Tools product manager. "IQON also meets a growing need for maximum storage capacity in compact service bays, as the 24" depth of the unit leaves room for fully extended drawers between the wall and vehicle. IQON roll cabs are built with the toughness and drawer capacity of our deeper units, while being designed as an exclusive tool storage solution, which customers expect from Snap-on."

IQON cabs also feature extra case corner gussets which reinforce the entire structure, preventing cabinet racking and allowing use of additional drawer space by eliminating the need for a crossbar to support the middle. The rugged and fully-welded drawers include ball-bearing slides that support up to 227 lbs. per drawer and up to 554 lbs. on the double slide drawers. Additional lower cabinet welds ensure these cabinets are manufactured to endure everyday use. As an added strength benefit, the top edges of the side walls are doubled down 360 degrees and then inward 90 degrees to create a plane for welding to the top panel. This continuous metal support produces spot welds with functional strength 10 times that of welds along the side. The IQON line is available in more than 10 different color schemes.

Find out more about the IQON rolling cab storage series, as well as other tools and products, by contacting your participating Snap-on franchisee or other representative, visiting [www.snapon.com](http://www.snapon.com) or calling toll-free 877-SNAPON-4 (877-762-7664).
