## **Empower on Sales with Growing Snap-on Collision Coverage**

**LINCOLNSHIRE, Ill., Dec. 12, 2018** – With its fall diagnostic software release, Snap-on® offers more safety and Advanced Drivers Assistance Systems (ADAS) coverage than ever before. Technicians get more Vehicle Communications Systems, and now new Guided Component Tests targeted to this area of repair.

“Collision repair is not covered by a manufacturer’s warranty, regardless of vehicle age. This is good news for repair shops because the repair may be done outside of the dealership,” said Leian Wunderlich, software program manager, Snap-on Diagnostics. “Furthermore, many insurance companies pay for pre- and post-scans, where scans are required by vehicle manufacturers. This provides new opportunities for business growth.”

Snap-on software includes new and enhanced coverage for airbag, intelligent cruise control, collision mitigation, electronic parking brake, head up display, lane departure warning, occupant classification, parking assist, radar sensor surround view mirror and more.

For those new to ADAS, Snap-on onboard CTM training and Guided Component Tests walk technicians through the process for pinpoint diagnosis, including:

- Adaptive front lighting
- Adjustable pedal
- Blind spot detection radar
- Blind spot warning system
- Center display
- Electronic parking brake
- Forward collision warning system unit
- Front and rear camera
- Intelligent cruise control
- Lane departure warning
- Object detection
- Parking assist
- Rain sensors
- Steering angle sensor

To learn more about any of Snap-on’s diagnostic solutions, talk to a Snap-on representative or visit <http://diagnostics.snapon.com>.
