Innovative John Bean Equipment On Display at NADA

Conway, AR – Feb. 10, 2020 – Three John Bean® wheel service products will be on display for customers to see in action at the National Automobile Dealers Association (NADA) show held Feb. 14-17 at the Las Vegas Convention Center.

“We are excited to give our customers a hands-on opportunity to see innovative John Bean equipment in action at NADA,” said William Bruno, vice president of key accounts for John Bean. “Our goal with all John Bean wheel service products is to help customers improve their businesses with efficient, high-performing equipment that increases productivity each and every day.”

One of the products on display will be the new *John Bean* [T7800](#) tire changer. Ideal for high volume shops, the *John Bean* T7800 is a leverless tire changer with a dynamic bead breaker system, intuitive control panel and the powerMONT™ tool that provides more flexibility in wheel clamping, reducing the possibility of wheel damage. The T7800 has a unique collection of tools, including a lower bead camera viewer, on-floor bead breaker and QuickLok™ technology that improves shop productivity. It carries an exclusive set of standard accessories, including a reverse mount wheel kit and light truck kit, allowing shops to service a wider range of wheels.

John Bean customers can see the T7800 in action at the Fiat® Chrysler® Automobiles (FCA) booth (#6409N) and the General Motors® Dealer Equipment (GMDE) booth (#3745C). Also at the FCA booth, John Bean will feature its V3300 diagnostic wheel alignment system and B2000P wheel balancer.

The award-winning *John Bean* [V3300](#) is designed for high-volume shops and the V3300 provides immediate, precise alignments and its intuitive notification system helps to prevent errors before they result in a bad alignment.

The *John Bean* [B2000P](#) is an automated diagnostic wheel balancing system that offers touchless measurement and analysis. Automatic inputs remove the chance for error and inaccurate results, and when combined with precise wheel balancing, the Runout Force Vectoring (RFV) diagnostics assure uniformity based total ride quality.

Customers can find out more about *John Bean* automotive wheel service and collision repair products by calling 877-482-4866 or visiting www.JohnBean.com.
