SUN Showcases Collision Repair Information at NORTHEAST; Visit Booth #117 for a Demonstration

If you'll be attending the Alliance of Automotive Service Providers of New Jersey (AASP/NJ) NORTHEAST 2020 Automotive Services Show at the Meadowlands Exposition Center in Secaucus, New Jersey, March 20-22, 2020, be sure to visit SUN®, a brand of Snap-on®, at booth #117.

The company will feature its new collision repair information software, including the recently-introduced wiring diagrams with exclusive features such as interactivity that connects the diagrams directly to component information.

Nicholas Blais, product manager for SUN, and Kiran Wagh, sales manager for SUN, will be at the booth to demonstrate the new collision repair software.

SUN Collision Repair Information offers collision repair facilities a comprehensive source of repair information that covers all types of repairs, both collision and mechanical, and includes OEM and real-world industry information. It provides complete, accurate data to help shops repair virtually any vehicle, inside and outside, with maximum efficiency.

The new interactive wiring diagrams give collision repair technicians the ability to access complete component information from inside the diagram. While viewing a wiring diagram, technicians can click on any component within the diagram to see a pop-up menu with selections to learn more about specifications, component location, connector views, guided component tests and more.

Features in SUN Collision include:
- Materials, body and frame, paint and finish
- OEM collision repair information for all makes
- Repair information searchable by part number
- ADAS Quick Reference and repair information
- Interactive wiring diagrams link to component information
- Real-world insights for mechanical repairs
- User-friendly graphical layout
- Mobile friendly

SUN Collision Repair Information will be located in the Car-O-Liner booth #117 at NORTHEAST. For onsite inquiries at the show, please contact at Nicholas Blais at 858-243-0298 (cell) or by email at nicholas.blais@suncollision.com.
