Snap-on Updates Fast-Track® Intelligent Diagnostics Tool Matcher Website Feature

LINCOLNSHIRE, Ill., March 15, 2021 – Snap-on® has updated the Fast-Track® Intelligent Diagnostics [tool matcher](#) feature on its [website](#) with the addition of the new TRITON-D₁₀™ integrated diagnostics system. Professional technicians can use the tool matcher feature to find the best Fast-Track Intelligent Diagnostics-enabled platform for their specific needs.

Technicians can click on the “Let’s Get Started” button to complete a short survey about the jobs they perform every day, the features that they use or believe would come in handy and how often they connect to a car. Once they hit the “Find Your Ideal Platform” button, they’ll receive a recommendation for the right Snap-on Intelligent Diagnostics tool for them, either [ZEUS®](#), [TRITON-D₁₀™](#) or [APOLLO-D₉™](#).

The results give technicians an overview of the product, a product video to watch and the option to request a demonstration from their franchisee or other Snap-on representative. The tool matcher also provides a comparison of the Fast-Track Intelligent Diagnostics range and shows how the different products increase in features and capabilities.

Fast-Track Intelligent Diagnostics helps technicians by providing them with everything they need and nothing that they don’t, guiding them directly to the fix and eliminating guesswork. What makes it unique is that it provides pre-filtered information which shows information relevant to the specific vehicle and fault code.

Technicians that use the tool matcher feature will be able to increase their own understanding about the innovation inside Fast-Track Intelligent Diagnostics and how it saves significant time and boosts productivity in their work day.

To learn more information about Fast-Track Intelligent Diagnostics, visit <http://diagnostics.snapon.com> or talk to a Snap-on franchisee or other sales representative.
