## **SUN Collision Offers Two-Month Complementary Subscription with Purchase of John Bean Tru-Point ADAS Calibration Tool**

**SAN DIEGO, Calif. – Nov. 16, 2022** – SUN® Collision has teamed up with John Bean® to offer a one-stop OEM collision and repair solution that ensures calibrations are done accurately and efficiently for vehicles equipped with advanced driver assistance systems (ADAS). As a special deal, auto repair shops that purchase a Tru-Point™ ADAS calibration system will receive a complementary two-month subscription to SUN Collision Repair Information.

“We’re excited to offer SUN Collision and the Tru-Point ADAS calibration system together as a productivity solution. This will help shops significantly streamline every step of the re-calibration process using up-to-date OEM procedures so they can get vehicles safely back on the road,” said Chris Bonneau, SUN Collision business manager. “The complementary subscription also gives shops the opportunity to see how they can further expand their ADAS calibration business, resulting in increased profits and customer satisfaction.”

SUN Collision provides comprehensive OEM repair information and procedures for body and frame, paint and finish, and materials for all makes and models. Driven by a powerful 1Search search engine, the software also includes a quick link to advanced driver assistance systems (ADAS) information, making it easy to diagnose, repair and calibrate ADAS components including sensors, cameras, radar systems and control modules. The software’s database is kept current throughout the year, with ongoing updates and repair information for the latest model year vehicles.

Tru-Point uses highly accurate advanced camera technology, targets and top-of-the-line software to quickly uncover any alignment problems the vehicle might have so shops can perform a perfect ADAS calibration. The system not only checks the ADAS-related alignment values, it also closely monitors each step of the setup procedure, making sure that the process was completed to meet OEM safety specifications.
