## **John Bean V4400 Commander Wheel Alignment System Honored with Motor Top 20 Award**

**CONWAY, Ark. – Sept. 9, 2025** – The John Bean® V4400 Commander™ Wheel Alignment System has been honored with a 2025 MOTOR Top 20 award.

Featuring a dual-tower system with two remote alignment posts equipped with high-resolution cameras, the award-winning [John Bean V4400](#) Commander offers users a comprehensive, stable field of view while reducing the need for frequent camera adjustments. This configuration eliminates the requirement for a cross-view camera, enhancing system flexibility by removing the need for a line of sight between the alignment towers.

The dual-tower design of the V4400 *Commander* also accommodates a wide range of vehicle lengths and widths, bay setups and drive-through compatibility. This versatility allows for optimal service area placement and tower positioning, providing a smaller footprint in the work area while preserving space in front of the vehicle for additional repairs, such as ADAS recalibration.

“The John Bean V4400 Commander provides precise, repeatable alignments powered by dual-tower cameras and D2 Max technology, without the need for a cross-view camera,” said Jordan Krebs, product manager for alignment and ADAS, Americas at John Bean. “The V4400 Commander is an advanced wheel aligner designed to transform shop productivity and flexibility with its innovative features and user-centric design. Everyone at John Bean is honored to participate and receive this recognition from MOTOR Information Systems.”
