Learn the Basics of the Pro-Cut 3Cs Training Method

WEST LEBANON, N.H. – Dec. 2, 2025 – Pro-Cut™ provides free online training to help shops maximize the use of their *Pro-Cut* on-car brake lathes. To help users get started, *Pro-Cut* offers the 3Cs training method which provides the basics of lathe operations.

“At Pro-Cut, our goal is to make sure every shop gets the absolute best performance from their Pro-Cut lathe,” said Jeff Hastings, president of Pro-Cut. “The 3Cs training method – connect, compensate and cut – gives technicians the essential foundation they need to start confidently. By offering free, accessible online training, we are helping shops improve efficiency, accuracy and most importantly their customers’ satisfaction.”

The 3Cs of *Pro-Cut* online training includes three short videos providing details on the 3Cs and covering the basics for using a *Pro-Cut* lathe.

1. [Connect](#) – learn how to attach adapter to hub, attach lather to adapter, set cutting head and arms, lock trolley in position and set shut-off cam.
2. [Compensate](#) – learn to disengage e-stop if engaged, start motor and adjust speed to 100% power for compensation and learn about the adjustment buttons on lathe.
3. [Cut](#) – learn how to properly machine the rotors.

“Because we continually emphasize the value of resurfacing and matching brake rotors, both for shops and their customers, we believe it is important to make sure that shop personnel know how to maximize the use of their Pro-Cut on-car brake lathes,” said Hastings. “We have developed additional training options to help them learn how to leverage their Pro-Cut investments to enhance performance, efficiency and profitability.”

For more in-depth training, *Pro-Cut* offers free online training courses every Thursday. To see a schedule of classes, [click here](#).
