New Video Showcases Productivity-Enhancing Pro-Cut X1 HD On-Truck Brake Lathe

WEST LEBANON, N.H. – Nov. 11, 2025 – A newly released video highlights the award-winning Pro-Cut™ X1 HD On-Truck Brake Lathe and shows how service providers who add the X1 to their shop will benefit from their investment.

The brief [video](#) demonstrates how the Pro-Cut X1 saves money and reduces downtime by repairing and not replacing brake rotors on trucks, buses and medium and heavy-duty vehicles.

“There are significant financial advantages to repairing rotors rather than replacing them,” said Jeff Hastings, president of Pro-Cut. “Installing new rotors on trucks, buses and tractor trailers is hard work, time consuming and expensive. The X1 brake lathe machines the rotor in about 30 minutes, saving the cost of a replacement rotor and hours of vehicle downtime.”

The [Pro-Cut X1](#) is powered by a 48V DC variable speed motor with the power to turn large vehicle axles. Its low-range gearbox provides ample torque while adjustable tool arms and 190 mm feed screw allow techs to match-machine the largest rotors in the industry. It features separate speed and feed controls as well as everything needed to machine the rotors without removing them from the hub.

“Because the Pro-Cut X1 is an on-truck brake lathe, service providers will also realize significant labor time savings since replacing one disc can be a six-hour operation on many vehicles,” added Hastings. “With the X1, service providers can resurface rotors quickly and efficiently, reducing total vehicle downtime from days to hours.”
