Pro-Cut Award-Winning Equipment on Display at SEMA

WEST LEBANON, N.H. – Oct. 21, 2025 – The industry-leading Pro-Cut™ X19™ cordless on-car brake lathe and other award-winning Pro-Cut equipment will be showcased at the 2025 Specialty Equipment Market Association (SEMA) Show, Nov. 4-7 at the Las Vegas Convention Center.

In addition to the Pro-Cut X19, the X1 HD truck brake lathe, X15 Rotor Matching System, B17 Super Bench combination lathe and Mule™ Tire Trolley will be available for hands-on demonstrations at the Snap-on® Total Shop Solutions (TSS™) booth 32017 in the South Upper Hall.

“Shop owners, fleet managers and others who are looking to reduce costs and increase revenues can visit us at SEMA and see firsthand how repairing, not replacing, rotors with Pro-Cut lathes are a money-making decision,” said Jeff Hastings, president of Pro-Cut. “We have a wide variety of products available for demonstrations so SEMA attendees can see for themselves how Pro-Cut brake lathes improve efficiency, performance and the bottom line.”

Featuring the first and only cordless rotor matching system, the Pro-Cut X19 is powered by a 48 volt 50Ah lithium iron phosphate battery and can machine up to 50 discs, which translates to over eight hours of operating time from a single charge.

The Pro-Cut X1 is powered by a variable speed motor with the power to turn large vehicle axles and is the ideal solution for shops that perform heavy-duty brake service, including resurfacing brake rotors on trucks, buses and other oversized industrial vehicles.

The Pro-Cut X15 rotor matching system was Pro-Cut's first foray into DC motors which opened the door to smoother operation, tighter run-out tolerances and superior surface finishes, when compared to AC alternatives.

The Pro-Cut B17 Super Bench combination lathe lets users to switch from resurfacing brake discs to drums in seconds with the P² quick change cutting head.

The Pro-Cut Mule Tire Trolley is designed to simplify and speed up wheel removal and installation as well as enhance safety and efficiency for service providers.
