Pro-Cut X19 On-Car Brake Lathe Approved for Use by Subaru Dealers, Service Providers

Award-Winning X19 is World's First Cordless On-Car Lathe

WEST LEBANON, N.H. – July 22, 2025 – The award-winning Pro-Cut™ X19 cordless on-car brake lathe has been approved by Subaru for use by its dealerships and service providers when performing brake service and repairs.

"The Pro-Cut X19 is one of the most technologically advanced on-car brake lathes available. Because it is the first cordless on-car lathe, it enhances productivity and offers versatility like no other," said Jeff Hastings, president of Pro-Cut. "We want to thank Subaru for approving the X19 for use by Subaru service providers. By repairing, not replacing brake rotors, the increased profitability, customer satisfaction and environmental benefits are a win-win for Subaru dealers and vehicle owners."

Featuring the first and only rotor matching system in the world, the *Pro-Cut X19* is powered by a 48 volt 50Ah rechargeable battery and can machine up to 30 discs, which translates to over eight hours of operating time from a single charge. Further, the lathe can be plugged in for immediate power from the wall if needed. Like all *Pro-Cut* rotor matching systems, the X19 provides disc tracking, maintenance alerts and variable speed control.

A variable speed DC motor delivers smooth, clean and consistent power for superb, OE-quality finishes on a wide variety of modern vehicle platforms, including trucks with speed-sensitive locking rear axles. All X19 on-car lathes feature a lithium ion phosphate battery and a sophisticated battery management system that provides protection from overcharge, over-discharge, short circuit, over-current and high temperatures.
