Pro-Cut X19 On-Car Brake Lathe Wins 2025 Pro Tool Innovation Award: Recognized for Excellence in Innovation and Performance

WEST LEBANON, N.H. – Sept. 17, 2025 – Pro-Cut™ is proud to announce that its X19™ cordless on-car brake lathe has been awarded the prestigious 2025 Pro Tool Innovation Award (PTIA) in recognition of its groundbreaking design and exceptional performance. This marks the 13th year of the annual PTIA, a competitive event that highlights the best tools and products across the professional trade and DIY industries.

The 2025 Pro Tool Innovation Awards saw nearly 400 entries from top-tier brands in more than a dozen categories. These entries were carefully reviewed and evaluated by a panel of experts, professionals and industry veterans, making the competition fierce and the selection of winners a testament to the outstanding quality and innovation within the industry.

"The Pro Tool Innovation Awards exist to honor the best of the best," said Clint DeBoer, general manager for the PTIA. "We are thrilled to see the level of innovation this year, especially with so much stiff competition. This awards' program continues to showcase the cutting edge of product development, and each winner truly exemplifies what the awards stand for."

"We are very proud to receive a prestigious Pro Tool Innovation Award for the Pro-Cut X19, one of the most innovative and versatile tools on the market today," said Jeff Hastings, president of Pro-Cut. "As more and more of our customers realize the savings and profitability of repairing and not replacing brake rotors, they will find that the X19 is a groundbreaking tool that enhances shop productivity and efficiency while increasing business opportunities."

Featuring the first and only cordless rotor matching system in the world, the *Pro-Cut X19* is powered by a 48 volt 50Ah rechargeable battery and can machine up to 50 discs, which translates to over eight hours of operating time from a single charge. Further, the lathe can be plugged in for immediate power from the wall if needed. Like all *Pro-Cut* rotor matching systems, the X19 provides disc tracking, maintenance alerts and variable speed control.

The Pro Tool Innovation Awards recognize the very best tools, equipment and technology in the professional trade industries. The PTIA celebrates innovations in design, usability and performance across a broad spectrum of categories, including power tools, hand tools, outdoor products and more. Each year, a panel of industry experts and professionals selects the winners based on an in-depth evaluation of what makes these products innovative in their respective fields. The 2025 Pro Tool Innovation Award winners represent companies and products that are shaping the construction, landscaping, automotive and manufacturing industries.
