Challenger Lifts Adapter Cart Provides a Mobile Storage Solution for Essential Lift Accessories

LOUISVILLE, Ky. – July 28, 2026 – The Challenger Lifts® Adapter Cart is a mobile storage solution designed to streamline workflow in busy automotive service bays. Built to keep adapters, footpads and spacers exactly where technicians need them, the Adapter Cart helps shops reduce setup time, minimize downtime and maintain a clean, efficient working environment.

“Designed for the realities of a fast-paced shop, the Adapter Cart moves easily from bay to bay, eliminating wasted steps and unnecessary trips across the shop floor,” said Trevor Coleman, national sales manager for Challenger Lifts. “The cart is designed for shops that service a wide variety of vehicles, giving technicians the assortment of adapters they need to be prepared to lift virtually any vehicle safely and correctly. By consolidating everything needed for safe, efficient lifting into one centralized, mobile unit, technicians can stay focused on the job rather than searching for equipment. It is a simple solution, but it makes a real difference in day-to-day productivity.”

The *Challenger Lifts* [Adapter Cart](#) offers centralized storage for essential lifting accessories, keeping equipment at the point of use rather than scattered throughout the shop. This mobility translates directly into faster setup and fewer interruptions between jobs, supporting a more consistent and efficient flow throughout the bay.

At the core of the system is the accessory cart itself, a durable, mobile unit built to store and transport lift adapters and accessories throughout the shop. It comes equipped with a full set of components designed to address varied lifting requirements.

The kit includes four six-inch stack adapters, which serve as drop-in extensions for vehicles equipped with running boards or side steps, and four three-inch stack adapters, ideal for moderate height adjustments when accessing vehicle lifting points.

For electric vehicle service, the cart includes a set of four EV foot pads engineered to safely support select electric vehicles by helping protect sensitive battery and chassis components. Also included are four cab-off adapters, designed for safely lifting truck cabs from frames. These feature U-channel pads that cradle pinch welds, providing added stability and protection during cab removal procedures.

The Adapter Cart includes a GM® footpad set that offers custom wide-frame footpads engineered for 2019-2026 GM half-ton pickup trucks, which also fit Cadillac®, Chevrolet® and GMC® trucks.
