New Pro-Cut Training for Toyota Service Providers

WEST LEBANON, N.H. – Feb. 3, 2026 – Pro-Cut, in collaboration with Toyota, has developed industry-leading brake service training for Toyota® and Lexus® service providers. The new program uses the Pro-Cut™ X15 rotor matching system to deliver expert brake service instruction for their technicians.

“Toyota is known globally for its commitment to quality and innovation, and we are proud to see that philosophy extend to their service training,” said Jeff Hastings, president of Pro-Cut. “By incorporating Pro-Cut X15 technology into their training program, Toyota is equipping its technicians with the tools and knowledge to deliver best-in-class brake service. This partnership reflects our shared dedication to precision, safety and customer confidence.”

More than 40 *Pro-Cut* X15 brake lathes are supporting the program rollout at Toyota North American training centers. This ensures that every technician participating in Toyota’s brake service training will gain direct experience using *Pro-Cut*’s rotor matching technology. The initiative enables Toyota to deliver the rotor matching service outlined in its warranty service bulletins across all dealerships, enhancing brake service quality, customer satisfaction and warranty performance.

The *Pro-Cut* X15 on-car brake lathe is the first rotor matching system in the world to be driven by a 48 volt DC motor, allowing for smooth operation, tighter run-out tolerances and superior surface finishes. The all-new computer system on the X15 provides disc tracking, maintenance alerts and variable speed control.

“*Pro-Cut*’s rotor matching systems are recommended or mandated for warranty service by nearly every major automotive manufacturer in the United States,” continued Hastings. “The company looks forward to working with additional OEMs to develop similar training partnerships that improve brake service consistency while managing warranty service costs.”
