Pro-Cut Mule Tire Trolley Recognized With MOTOR Top 20 Award

WEST LEBANON, N.H. – Sept. 9, 2026 – The Pro-Cut™ Mule™ Tire Trolley has been recognized as a MOTOR Top 20 Award winner.

"The Mule helps technicians move heavy wheel assemblies with greater speed, safety and efficiency, boosting productivity while reducing the physical strain of everyday tire service," said Bruce Prince, national sales manager, North America for Pro-Cut. "We are very proud that the Mule has earned a MOTOR Top 20 Award. We thank the shop owners and service professionals who appreciate streamlined wheel removal and installation and cast their votes for the Mule."

The *Pro-Cut Mule* tire trolley is an innovative and practical solution that improves productivity and performance in the shop. The quick and effortless wheel removal and installation process increases shop efficiency, and its ergonomic design helps prevent back strain and reduce injuries.

The *Mule* is powered by a simple hydraulic foot pump, requires no electricity, air hoses or batteries. Using the *Mule* is as simple as sliding the support arms under the wheel, removing the lug nuts and rolling the wheel assembly away. Reinstallation is equally effortless as technicians can simply position the wheel on the hub, adjust the height and rotate the assembly into alignment.

Designed to handle wheel assemblies ranging from compact passenger vehicles to Class 5 trucks, the *Mule* weighs just 97 pounds, features four-inch locking casters for smooth movement throughout the shop and an adjustable lifting range to accommodate a wide variety of vehicle applications. It is an essential companion to *Pro-Cut's* rotor matching systems.

"Back injuries from manually removing and handling wheels on lifted vehicles are a significant ergonomic risk, particularly when technicians repeatedly handle heavy truck and SUV wheel and tire assemblies or work in awkward positions," said Prince. "The Mule can help eliminate the risk while simplifying the frequent task of removing wheels from vehicles, making the process easier and more efficient for technicians. This not only improves productivity but also enhances the technician experience, making it a valuable employee retention tool. And with storage space in a shop limited, the Mule's nesting design allows them to stack together like shopping carts to save significant space."

MOTOR Top 20 Award winners were selected based on votes from employees, customers, automotive professionals and other industry peers. Through their votes, members of the automotive industry recognized *Pro-Cut's* solution as one of the year's most valuable new contributions.
