Pro-Cut Urges Proactive Maintenance During Brake Safety Week

WEST LEBANON, N.H. – Aug. 19, 2026 – Pro-Cut™ is proud to support the efforts of the Commercial Vehicle Safety Alliance (CVSA) and its Brake Safety Week initiative held Aug. 23-29.

“Brake Safety Week is the ideal time for commercial vehicle service providers to encourage their customers to take advantage of comprehensive brake inspections,” said Bruce Prince, national sales manager, North America for Pro-Cut. “Proactive maintenance helps ensure commercial vehicle braking systems are operating safely and at peak performance.”

CVSA's [Brake Safety Week](#) is a seven-day focused inspection and enforcement initiative designed to improve safety by ensuring that commercial motor vehicles on the roadways are operating with properly maintained and functioning braking systems.

“When brake inspections identify the need for rotor service, the Pro-Cut X1 on-truck brake lathe helps shops complete those repairs effectively while ensuring vehicles return to the road quickly,” said Prince. “The X1 is expertly designed for significant labor time savings since rotors can be resurfaced quickly and efficiently on the vehicle, reducing total vehicle downtime from days to hours.”

The [Pro-Cut X1](#) is powered by a 48V DC variable speed motor with the power to turn large vehicle axles. Its low-range gearbox provides ample torque while adjustable tool arms and 190 mm feed screw allows techs to match-machine the largest rotors in the industry. It features separate speed and feed controls as well as everything needed to machine the rotors without removing them from the hub.
