Pro-Cut X1 HD On-Truck Brake Lathe Featured Product at Ford Pro Elite Commercial Service Facilities

WEST LEBANON, N.H. – April 29, 2026 – The award-winning Pro-Cut™ X1 HD On-Truck Brake Lathe is a featured repair product within Ford Pro™ Elite Commercial Service Facilities, supporting efficient brake service for medium and heavy-duty vehicles.

“Pro-Cut’s X1 HD On-Truck Lathe is designed for service and repair on Ford F-450 through F-750 vehicles, delivering precision on-truck rotor machining that aligns with Pro-Cut’s ‘repair, don’t replace’ strategy when it comes to brake rotors,” said Jeff Hastings, president of Pro-Cut. “Ford Pro is focused on maximizing vehicle uptime and the X1 HD helps service centers do exactly that. By machining rotors directly on the vehicle, technicians can complete jobs faster, reduce labor time and lower overall service costs.”

[Ford Pro Elite Commercial Service facilities](#) focus on providing dedicated truck and fleet repair services for Ford vehicles and other OEM brands. The Ford Pro service facilities have service bays large enough to accommodate mobile service vans and even an F-750 bucket truck.

Built for heavy-duty performance, the [Pro-Cut X1](#) features a 48V DC variable-speed motor, adjustable feed control and a low-range gearbox for high torque. The system machines one axle in about 50 minutes, helping reduce downtime, extend rotor life and minimize technician strain.

“Pro-Cut is a long-time partner of Ford, and Pro-Cut has earned the Ford Field Service Award each year it has been presented,” said Hastings. “Ford Pro facilities utilizing the X1 are achieving full return on investment in approximately 20 axles, underscoring the X1’s value in high-volume commercial service environments. As Ford Pro expands its network of dedicated truck and fleet service centers, the Pro-Cut X1 HD On-Truck Brake Lathe has become essential equipment in these facilities.”
