Pro-Cut X1 HD On-Truck Brake Lathes Increase Profitability for Fleets

WEST LEBANON, N.H. – March 17, 2026 – Fleet managers and service providers looking to increase profitability and decrease downtime when performing brake service on heavy duty vehicles should look to repair rotors and not replace them. With the award-winning Pro-Cut™ X1 HD On-Truck Brake Lathe, repair facilities will earn back their return on investment and increase productivity and profitability.

“Heavy duty vehicles can have multiple brake systems and new rotors can cost hundreds of dollars each and take hours to replace,” said Jeff Hastings, president of Pro-Cut. “Installing new rotors on heavy duty vehicles is hard work, time consuming and expensive. The X1 brake lathe machines the rotor in about 30 minutes, saving the cost of a replacement rotor and hours of vehicle downtime.”

The *Pro-Cut X1* is powered by a 48V DC variable speed motor with the power to turn large vehicle axles. Its low-range gearbox provides ample torque while adjustable tool arms and 190 mm feed screw allows techs to match-machine the largest rotors in the industry. It features separate speed and feed controls as well as everything needed to machine the rotors without removing them from the hub.

“The Pro-Cut X1 brake lathe is expertly designed for service providers who perform heavy-duty brake service. For some vehicles, replacing one disc can be a six-hour operation. By repairing rather than replacing these specific rotors, the Pro-Cut X1 can pay for itself in one brake job,” said Hastings. “Since the Pro-Cut X1 is an on-truck brake lathe, fleets and service providers will also realize significant labor time savings since replacing even one disc can be time consuming and labor intensive. With the X1, rotors can be resurfaced quickly and efficiently, reducing total vehicle downtime from days to hours.”
